1 Registering bot in Telegram

First of all, open any Telegram messenger: mobile application (for example [for Android](#)), [web instance](#), [desktop one](#), or [others](#).

You can find official description here: <https://core.telegram.org/bots#botfather>. Below is just a brief instruction.

1. Find the [BotFather](#) bot and click **start**. The bot will answer with all possible commands it can process. You need the first one: **/newbot** - a new bot creation.
2. Click it or type and the bot will answer:
Alright, a new bot. How are we going to call it? Please choose a name for your bot.
3. Type a name for you new bot. E.g. "**MyNewTest**".
You will get the answer:
Good. Now let's choose a username for your bot. It must end in `bot`. E.g.: TetrisBot or tetris_bot.
4. Now fill in a username (it must be unique). Let's use **MyNewTelegramTest_bot**.

Finally, you will get a message like this:

As a result, we get **Telegram bot token**, which in our case is: **212117487:AAG-WRcJa...QtnGd8bUBu-L2LIQ**. Save it somewhere, you will need it later!

Now you can find your newly registered bot by typing the bot username: **mynewtelegramtest_bot** in the **search** field like before or by clicking telegram.me/MyNewTelegramTest_bot link in the last BotFather's output.

2 Assigning Telegram bot to MiniApps one

Let's connect our Telegram bot to MiniApps one.

Log in to MiniApps using the link <https://dev.miniapps.run/private/my-bots>. You will see all your bots created before. Select the one you need. The bot details will appear:

Back / Bot settings Emulate Statistics Delete

Bot ID: lk.118,1461153738238

Name: Test

URL: <https://665da10a.ngrok.io/index.jsp>

Request method: HTTP GET

Landing page: Not set

Connections:

-  Not connected to Telegram
-  Not connected to USSD
-  Not connected to Microsoft Bot Framework

In the **Connections** area, there is a gray Telegram icon with **Not connected to Telegram** hint. Click it and fill in the [previously saved Telegram token](#).

Click **Assign** button. Now the icon is active and the bot name defined in the Telegram messenger appears:

From now on, your users can use Telegram messengers to communicate with your bot.
